Message Transformation Guidelines - ConvertCRLFfromToLF

Content

1	Introduction	3
1.1	Properties	3
1.2	Example	3

1 Introduction

The ConvertCRLFfromToLF is the alternative created to convert the 'New Line' characters in a payload between 'CRLF' and 'LF'. In SAP PI/PO the module used was: ConvertCRLFfromToLF.

This solution is comprised by a groovy script, used to convert the payload 'New Line' characters to the target format configured in a property.

1.1 Properties

There is only 1 property required to use this groovy script:

- **Conversion.mode:** This field indicates the target format. The supported values are:
 - CRLF
 - LF

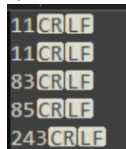

1.2 Example

Properties:

- **Conversion.charset:** LF

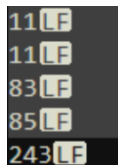

Result:

- Before script:

```
11CRLF
11CRLF
83CRLF
85CRLF
243CRLF
```

- After script:

```
11LF
11LF
83LF
85LF
243LF
```
