Data Transformation: Inventory SAP Business ByDesign to SAP

Configuration Guide
Data Transformation: Inventory SAP Business ByDesign to SAP
S/4HANA Cloud Public Edition

SAP

Content

1 Introduction

In this guide you shall learn how to consume the integration flow to transform data of object in SAP Business ByDesign into a form suitable and acceptable by SAP S/4HANA Cloud Public Edition

Definition

This integration flow is an accelerator that transforms the standard data of 'Inventory' object in SAP Business ByDesign into the SAP S/4HANA Cloud Public Edition's migration template of object 'Material Inventory Balance'.

Intended Audience

This integration flow is intended to be used by both partners and customers who are in the data migration phase of their implementation project of moving their SAP Business ByDesign system to SAP S/4HANA Cloud Public Edition system.

Structure

The structure of this guide follows the sequence of steps required to consume the integration flow for the purpose of data transformation using SAP Integration Suite service on SAP BTP.

System Connectivity

To use this integration flow you don't have to connect your SAP Business ByDesign system or SAP S/4HANA Cloud system to SAP Integration Suite. The data extracted from SAP Business ByDesign is passed to SAP Integration Suite over HTTPS and the data prepared as output is a file that can be taken manually and uploaded in SAP S/4HANA Cloud Public Edition via Migration Cockpit.

2 Business Scenario

Customers who are looking to migrate from SAP Business ByDesign ERP system to SAP S/4HANA Cloud Public Edition ERP system need an easy data migration path to save time and effort on data migration activities which is quite intensive.

With this intention SAP has delivered the mapping of data fields from SAP Business ByDesign Inventory object to SAP S/4HANA Cloud Public Edition equivalent object as part of this integration flow. The end result of the integration flow will provide you Inventory data file that is in the form of SAP S/4HANA Cloud Public Edition's material inventory balance migration template. You shall upload this file via Migration Cockpit in SAP S/4HANA Cloud Public Edition. This helps you to save effort and prepare the file easily for upload.

3 Prerequisites

To consume the integration flow you should have the following things done

    a)   Set up account in SAP BTP and subscribe to SAP Integration Suite service.

    b)   Set up required user roles and authorization in SAP BTP subaccount

    c)   Set up the required capabilities in SAP Integration Suite to trigger integration flow.

    d)   Have authorization to the Data Extraction functionality in SAP Business ByDesign

    e)   Have authorization to the Migration Cockpit app in SAP S/4HANA Cloud Public Edition

For setting up the required systems and users you can refer to these tutorials:

https://learning.sap.com/videos/preparing-for-data-migration-from-sap-business-bydesign-to-sap-s-4hana-cloud

4 Consumption of integration flow

Follow the steps below to transform your data and upload to SAP S/4HANA Cloud Public Edition.

Prepare for Data Transformation

To consume the integration flow for transformation you need to prepare the data that you want to transform. You should extract the required inventory data from SAP Business ByDesign.

Follow the steps below for preparation. You can refer to the learning session to understand in details:

a. Extract the data from ByD in form of ZIP file:
    i. Login to Business by Design system (where the data is residing) and on the left menu navigate to Application and User Management work centre.
    ii. Choose and open Data Extraction work center view.
    iii. Create a new data extraction run and define the filter parameters as you need.
    iv. Click Activate and Run. This will start the extraction job in the background.
    v. Check the status of the job in the Data Extraction view until it is finished.
    vi. Download the extracted ZIP file. This file needs to be passed to the integration flow via Post HTTP request.
b. Create a migration project in S/4 HANA public cloud and make sure you have added the migration object *Material Inventory Balance* to the project.
c. Login to SAP Cloud Integration and search for the package "**SAP Business ByDesign Accounting Data Transformation to SAP S/4HANA Cloud Public Edition"** and open it.
d. Select the package and click "Copy" to duplicate the entire package, including the "**Inventory Data Transformation**" integration flow, along with all other integration flows and documents.
e. Deploy the integration flow. Refer to the learning session for details.
f. After successful deployment of integration flow, make a note of the End Point URL generated. Refer to the learning session for details.

Transform Data

Once the preparation is done you are ready to execute the integration flow. To consume the integration flow, follow the steps below. For details you can refer to this learning session.

a. Set up an application to trigger the integration flow e.g., Postman.
b. Create a POST HTTP request, provide the user credentials, and upload the extracted ZIP file in the body of the request.
c. Send the request to the end point URL of integration flow. This will trigger the integration flow and start the data transformation. As a result, you shall receive a response file back from your triggering application.

Post Transformation

Once the response file is received follow the below steps:

a. Save the response ZIP file received.
b. Extract the XML file in ZIP. Open the XML file in Excel and click on save. Close the file.
c. This is the file that should be taken to SAP S/4HANA Cloud Public Edition migration project and uploaded. For details on uploading a file via migration cockpit in SAP S/4HANA Cloud Public Edition refer to this help document.

5 Customization and Enhancement of integration flow

You can customize the mapping or enhance the integration flow as per your requirement. For details on customization, you can refer to these tutorials:

- Tutorial 1: Customizing standard integration flows for data migration from SAP Business ByDesign to SAP S/4HANA Cloud Public Edition.
- Tutorial 2: Updating data structure in integration flows for data migration from SAP Business ByDesign to SAP S/4HANA Cloud Public Edition.
