1. Introduction

In this guide you shall learn how to consume the integration flow to transform data of an object in SAP Business ByDesign into a form suitable and acceptable by SAP S/4HANA Cloud Public Edition.

1.1. Definition

This integration flow is an accelerator that transforms the standard data of 'G/L Balance' object in SAP Business ByDesign into the SAP S/4HANA Cloud Public Edition's migration template of object 'FI - G/L account balance and open/line item.

1.2. Intended Audience

This integration flow is intended to be used by both partners and customers who are in the data migration phase of their implementation project of moving their SAP Business ByDesign system to SAP S/4HANA Cloud Public Edition system. This integration flow shall act as an accelerator to kick start and speed up your data migration task. However, it does not cover all attributes and mappings, hence enhance it as per your requirement.

1.3. Structure

The structure of this guide follows the sequence of steps required to consume the integration flow for the purpose of data transformation using SAP Integration Suite service on SAP BTP.

1.4. System Connectivity

To use this integration flow, you don't have to connect your SAP Business ByDesign system or SAP S/4HANA Cloud system to SAP Integration Suite. The data extracted from SAP Business ByDesign is passed to SAP Integration Suite over HTTPS and the data prepared as output is a file that can be taken manually and uploaded in SAP S/4HANA Cloud Public Edition via Migration Cockpit.

1.5. Additional Documentation

You may refer to these topics via links to gain insights into various topics you need to know before using the integration flow.

Setting up Required systems and Users
https://learning.sap.com/videos/preparing-for-data-migration-from-sap-business-bydesign-to-sap-s-4hana-cloud

2. Business Scenario

Customers who are looking to migrate from SAP Business ByDesign ERP system to SAP S/4HANA Cloud Public Edition ERP system need an easy data migration path to save time and effort on data migration activities which is quite intensive.

With this intention SAP has delivered the mapping of data fields from SAP Business ByDesign G/L Balance object to SAP S/4HANA Cloud Public Edition equivalent object as part of this integration flow. The end result of the integration flow will provide you the G/L Balance file that is in the form of SAP S/4HANA Cloud Public Edition's product migration template. You shall upload this file via Migration Cockpit in SAP S/4HANA Cloud Public Edition. This helps you to save effort and prepare the file easily for upload.

3. Prerequisites

To consume the integration flow, you should have the following things done

a) Set up account in SAP BTP and subscribe to SAP Integration Suite service.
b) Set up required user roles and authorization in SAP BTP subaccount
c) Set up the required capabilities in SAP Integration Suite to trigger integration flow.
d) User should have authorisation to the Migration Cockpit app in SAP S/4HANA Cloud Public Edition
e) The user should have unrestricted access to G/L Balances work center and Business Analytics work center in the SAP Business ByDesign system.
f) User should have the date format **DD.MM.YYYY** in SAP Business ByDesign system. if the date format is different user shall change it to the said format by navigating to User->My Settings->Date.

Please refer to the links mentioned in the section Additional Documentation to complete the prerequisites.

4. Consumption of integration flow

Follow the steps below to transform your data and upload to SAP S/4HANA Cloud Public Edition.

4.1. Data Extraction

To consume the integration flow for transformation you need to extract the required G/L Balance data from SAP Business ByDesign system.

Extract the data from SAP Business ByDesign: G/L Balances data is extracted from the SAP Business ByDesign using the following reports: *Trial Balance (FINGLAU01_Q0001)* and *G/L Accounts with Open Item Management - Open Items (FINGLAU02_Q0003)*.

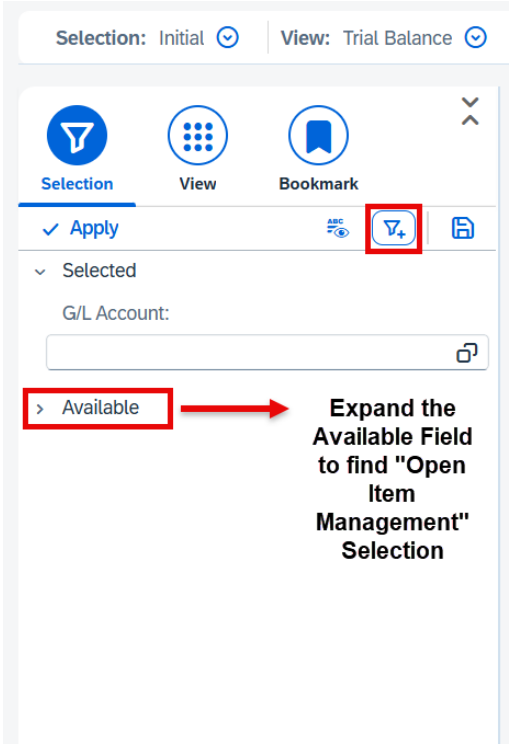

Follow the steps to extract the data for G/L Balance's integration flow.

1. Extract the data from the report *Trial Balance*. This will give the balances of G/L Accounts. We should omit the balances pertaining to open Payables, Open Receivables, Fixed Assets, Taxes and Inventory as they are taken care of in separate data migration objects. Also, using this report we should omit the G/L accounts which has open items.

   I. Logon to SAP Business ByDesign system (where the data is residing) and on the left menu, navigate to Business Analytics Work centre and then go to Design Reports View.

   II. Search for the report **Trial Balance**. Click on the report *Trial Balance* with ID *FINGLAU01_Q0001* to open it. Once the report is opened, click on "*Click here to start the report"* to get the data.
   Kindly also check the Knowledge article How Does Reporting Works in Business ByDesign for overview on using reports.

   III. Pass the values for the following selection parameters in the report as mentioned below in the table.

Note: If you cannot find any Selection parameter mentioned in below table, In the top right corner, click on Configure icon > Add Fields. Search for missing field and select the checkboxes Display in Report and Display in Selection to add them to Selection and Report.

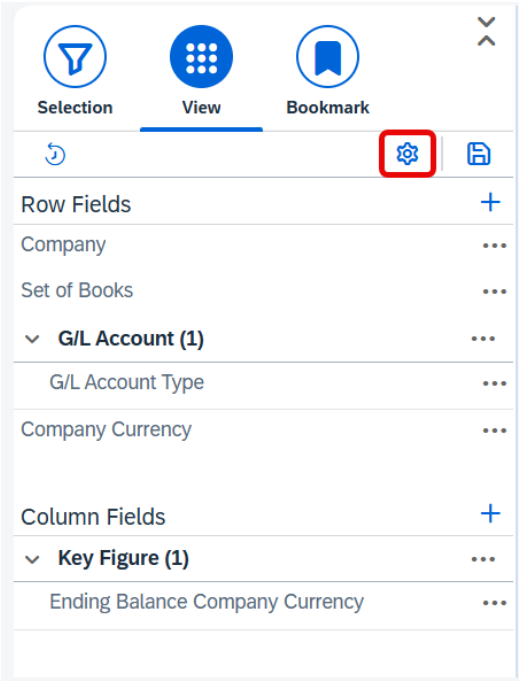

Selection Parameter Name Value	Value
Company	Select relevant Company from Absolute Values
Set Of Books	Default Set of Books ID
Accounting Period/Year	Year to Date
Open Item Management	False
G/L Account Type	Select all types except: Fixed Asset, Payable, Receivable, Tax, Inventory

Note: You will have to extract the report data for each Company

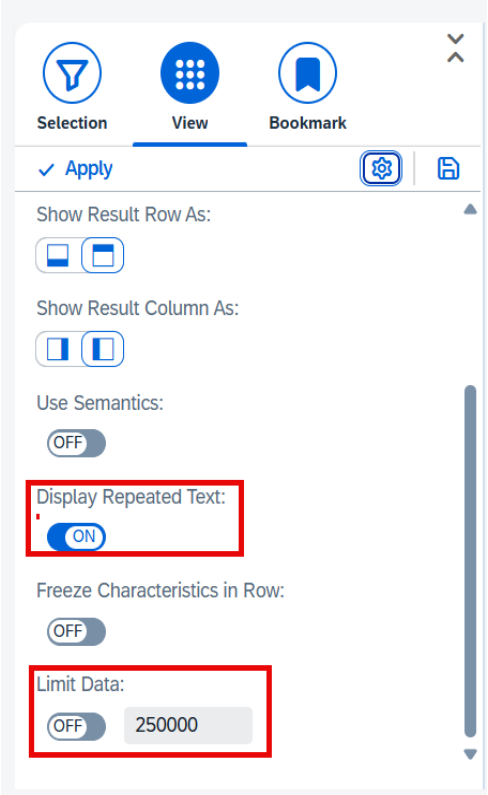

IV. Define a view for the report with the following list of result parameters:

Result Parameter Name	Field format
Company	Only ID
Set of Books	Only ID
G/L Account	Only ID
G/L Account Type	Only Description
Company Currency	Only ID
Ending Balance Company Currency	Only ID

V. Once all the fields in the above list are added to the report, on the left side panel, In the **View** section and click on **Chart/Table Settings** icon.

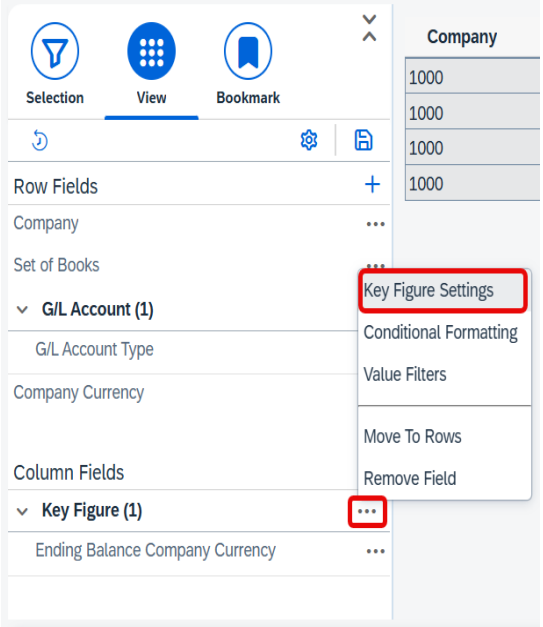

VI. **Enable** the checkbox for **Display Repeated Text** and **Disable** the Checkbox for **Limit Data.**

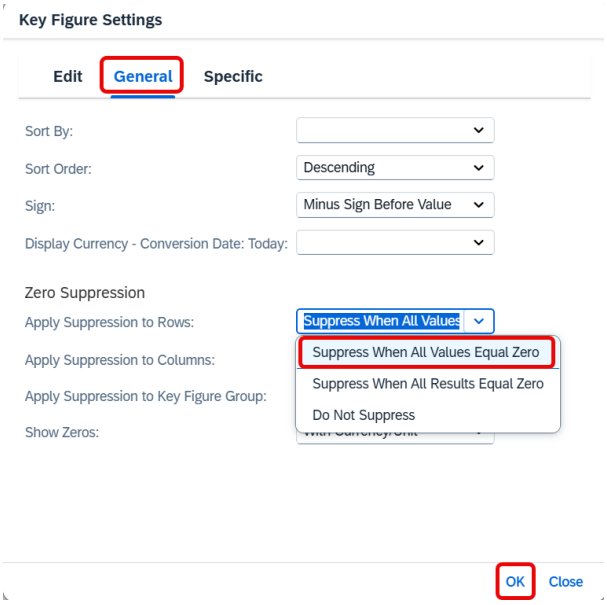

VII. After the making the above changes, click on **Chart/Table Settings** icon again to display Row fields and Column fields.

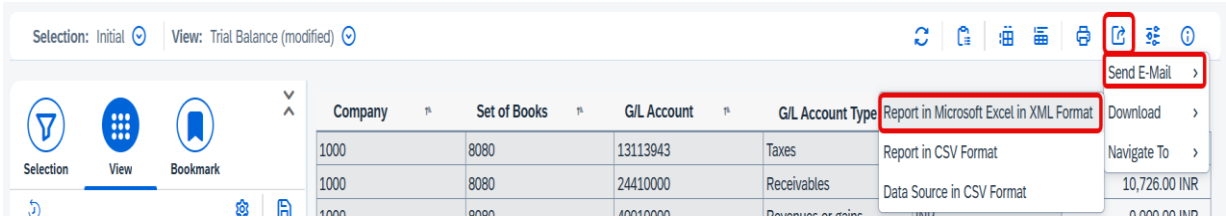

VIII. Select More options for Key Figure (1) and select **Key Figure Settings**.

IX. Select **General** tab and Under Zero Suppression section, for Field **Apply Suppression to Rows** choose **"Suppress When All Values Equal Zero".** Click on **Ok**.

X. Execute the report and download the data into XML file as shown in the screenshot below.
Note: Make sure to hide result row for all the fields in report

XI. Rename the downloaded XML file as **"GL Account Trial Balance.xml"**.

2. Extract the data from the report *G/L Accounts with Open Item Management - Open Items*. This step is required only if you have G/L Accounts that are open items managed and has open items that cannot be cleared before the migration.

I. The G/L Accounts with Open Items details can be extracted from the report *G/L Accounts with Open Item Management - Open Items (FINGLAU02_Q0003)* by following the below steps.

II. Search for the report **G/L Accounts with Open Item Management - Open Items** in Design Reports View of Business Analytics Work Center. Click on the report *G/L Accounts with Open Item Management - Open Items* to open it.

III. Pass the values for the following selection parameters in the report as mentioned below in the table.

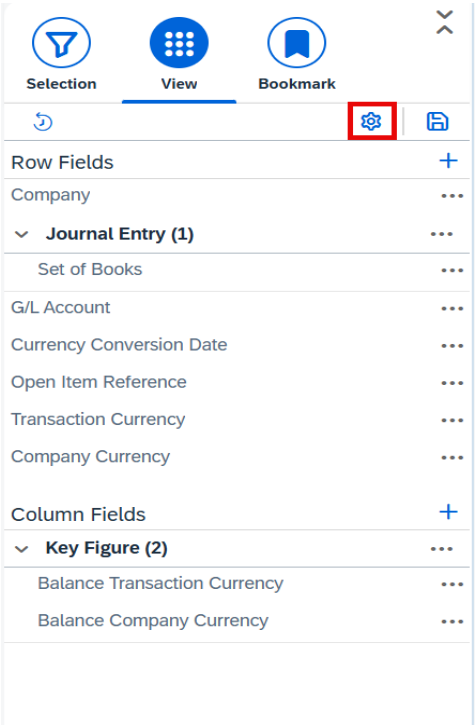

Selection Parameter Name Value	Value
Company	Select relevant Company from Absolute Values
Set Of Books	Default Set of Books ID
G/L Account Type	Select all types, except: Fixed Asset, Payable, Receivable, Tax, Inventory
Open Item Management	True
Key Date	Today
Display Currency - Conversion Date	Today

Note: You will have to extract the report data for each Company.

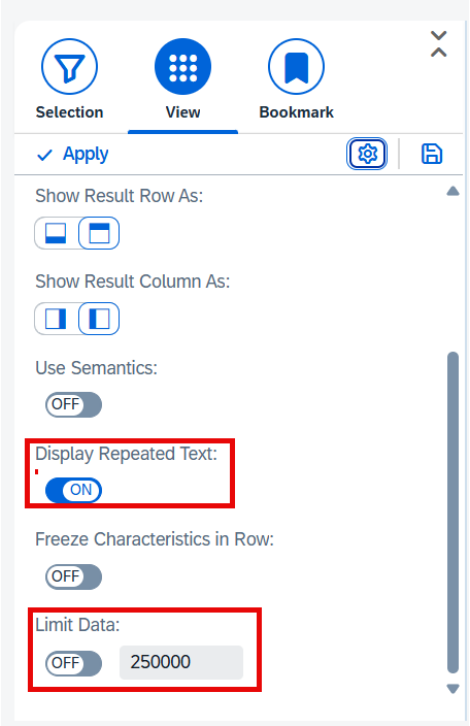

IV. Define a view for the report with the following list of result parameters:

Result Parameter Name	Field format
Company	Only ID
Set of Books	Only ID
Journal Entry	Only ID
G/L Account	Only ID
Currency Conversion Date	Only ID
Open Item Reference	ID and Description
Transaction Currency	Only ID
Company Currency	Only ID
Balance Transaction Currency	Only ID
Balance Company Currency	Only ID

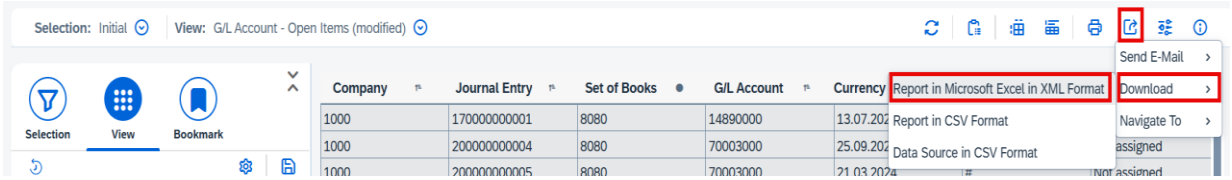

V. Once all the fields in the above list are added to the report, on the left side panel, In the **View** section and click on **Chart/Table Settings** icon.

VI. **Enable** the checkbox for **Display Repeated Text** and **Disable** the Checkbox for **Limit Data**.

VII. Execute the report and download the data into XML file.
Note: Make sure to hide result row for all the fields in report.

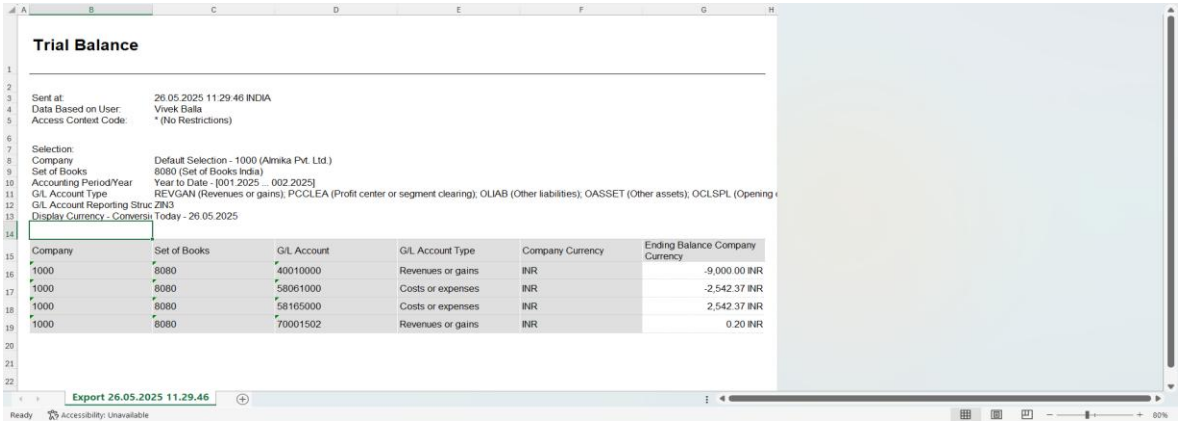

VIII. Rename the downloaded XML file as **"GL Account Open Items.xml".**

4.2. Data Preparation

The data extracted is in raw form and cannot be consumed by the integration flow. Therefore, you should prepare the data in the form that integration flow can accept.

Prepare the extracted data: Prepare the two extracted XML files separately by following the format for rows and columns as mentioned below.

1. Open "**GL Account Trial Balance.xml**" in Microsoft Excel and modify the format as described below.

Trial Balance

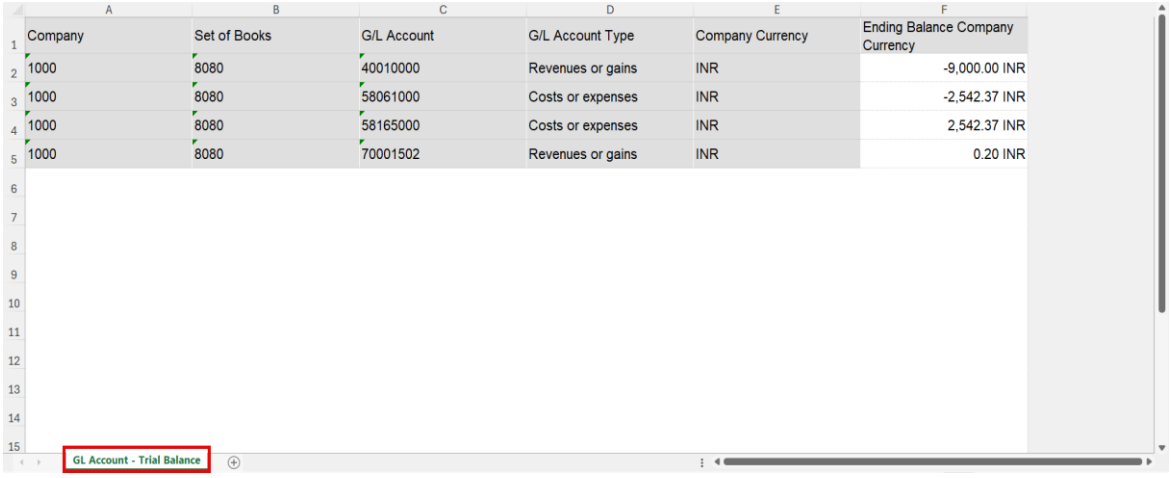

Sent at: 26.05.2025 11:29:46 INDIA
Data Based on User: Vivek Balla
Access Context Code: * (No Restrictions)

Selection:
Company: Default Selection - 1000 (Almika Pvt. Ltd.)
Set of Books: 8080 (Set of Books India)
Accounting Period/Year: Year to Date - [001.2025 ... 002.2025]
G/L Account Type: REVGAN (Revenues or gains); PCCLEA (Profit center or segment clearing); OLIAB (Other liabilities); OASSET (Other assets); OCLSPL (Opening
G/L Account Reporting Struc: ZIN3
Display Currency - Conversi: Today - 26.05.2025

Company	Set of Books	G/L Account	G/L Account Type	Company Currency	Ending Balance Company Currency
1000	8080	40010000	Revenues or gains	INR	-9,000.00 INR
1000	8080	58061000	Costs or expenses	INR	-2,542.37 INR
1000	8080	58165000	Costs or expenses	INR	2,542.37 INR
1000	8080	70001502	Revenues or gains	INR	0.20 INR

Export 26.05.2025 11.29.46

I. Delete the rows 1 to 14 from the sheet in the file so that the result data starts from row 1 in the file as shown below.
II. Delete all empty Columns if any (Check first and last column in the table).
III. Rename the sheet name to "**GL Account - Trial Balance**".

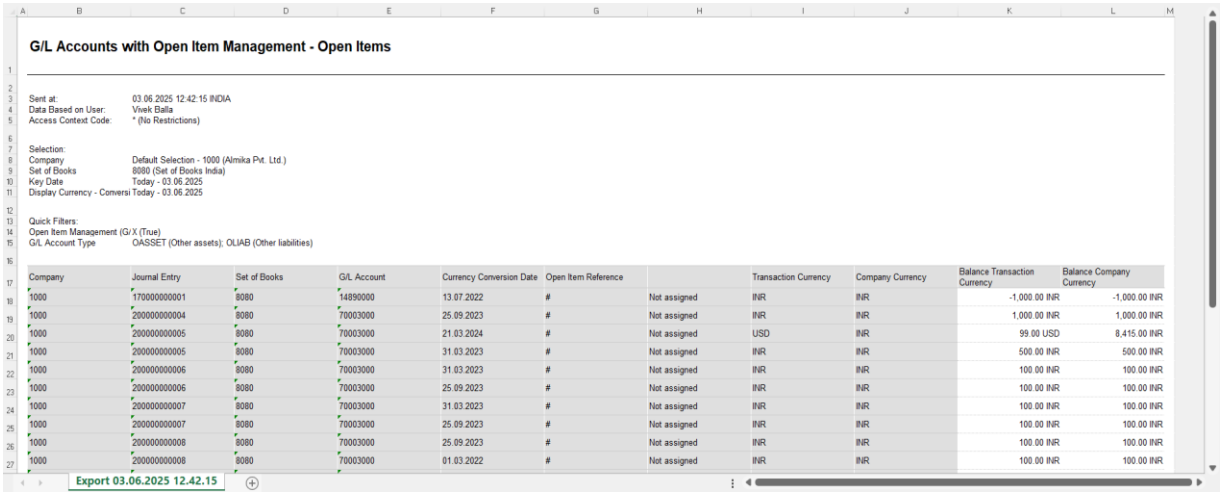

Company	Set of Books	G/L Account	G/L Account Type	Company Currency	Ending Balance Company Currency
1000	8080	40010000	Revenues or gains	INR	-9,000.00 INR
1000	8080	58061000	Costs or expenses	INR	-2,542.37 INR
1000	8080	58165000	Costs or expenses	INR	2,542.37 INR
1000	8080	70001502	Revenues or gains	INR	0.20 INR

GL Account - Trial Balance

IV. Convert the file **GL Account Trial Balance.xml** to **GL Account Trial Balance.ZIP** and save the ZIP file.

2. Open "**GL Account Open Items.xml**" downloaded XML file in Microsoft Excel and modify the format as described below.

G/L Accounts with Open Item Management - Open Items

Sent at: 03.06.2025 12:42:15 INDIA
Data Based on User: Vivek Balla
Access Context Code: * (No Restrictions)

Selection:
Company: Default Selection - 1000 (Almika Pvt. Ltd.)
Set of Books: 8080 (Set of Books India)
Key Date: Today - 03.06.2025
Display Currency - Conversi: Today - 03.06.2025

Quick Filters:
Open Item Management (G/L): X (True)
G/L Account Type: OASSET (Other assets); OLIAB (Other liabilities)

Company	Journal Entry	Set of Books	G/L Account	Currency Conversion Date	Open Item Reference		Transaction Currency	Company Currency	Balance Transaction Currency	Balance Company Currency

GL Accounts - Open Items

V. Convert the file **GL Account Open Items.xml** to **GL Account Open Items.ZIP** and save the ZIP file.

Note: Keep both the ZIP files separate and do not merge into one file.

4.3. Data Transformation

Once the data is prepared and ready in the required form, you are ready to execute the integration flow.

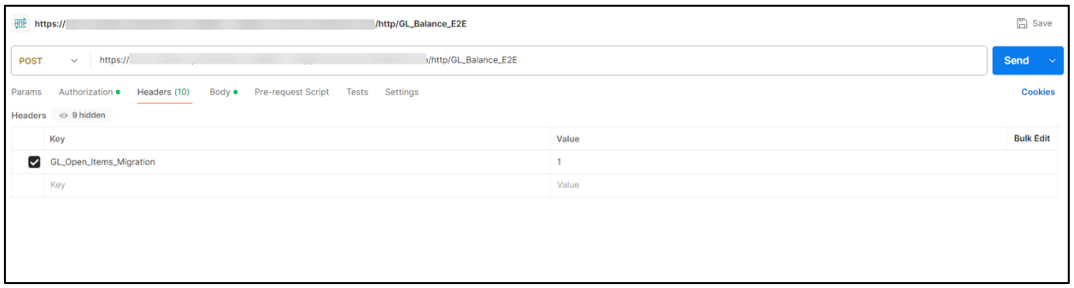

Make the following preparations to load the integration flow for executing data transformation.

I. Login to SAP Cloud Integration and search for the package "SAP Business ByDesign Accounting Data Transformation to SAP S/4HANA Cloud Public Edition". Open and copy the package into your workspace.
II. Open the Integration flow "GL Balances" from your workspace and click on Edit.
III. Deploy the integration flow. Refer to the learning session for details.
IV. After successful deployment of integration flow, make a note of the End Point URL generated. Refer to the learning session for details.

To consume the integration flow for data transformation and create a S/4HANA migration file, follow the steps below. For details refer to the learning session.

To consume the data transformation iflow for G/L Balances, recommended way is to first transform the data of only GL balances and migrate it into S/4HANA Cloud system and then, if needed, transform that data of GL open items and migrate to S/4HANA Cloud system.

I. Set up an application to trigger the integration flow e.g., Postman.
II. Create another POST HTTP request, provide the user credentials in Authorization section, upload the file **GL Account Trial Balance.ZIP** file in the Body section of the request.
III. Send the request to the end point URL of the integration flow. This will trigger the integration flow and start data transformation. As a result, you will receive a response file.
IV. Save the response ZIP file received. Extract the ZIP package and Open the XML file in Microsoft Excel. Click *Save*.
V. If you need to migrate the **open items of G/L Accounts**, only then follow this step.
    a. Create another POST HTTP request, provide the user credentials in Authorization section, upload the file **GL Account Open Items.ZIP** file in the Body section of the request.
    b. Add a header parameter "**GL_Open_Items_Migration**" in the request and pass the value "1" as shown below.

c. Send the request to the end point URL of the integration flow. This will trigger the integration flow and start data transformation. As a result, you will receive a response file.
d. Save the response ZIP file received. Extract the ZIP package and Open the XML file in Microsoft Excel. Click *Save*.

Note: In the response XML, some records contain fields that require your attention. These instances can be identified by locating cells with the value **"<<Enter Manually>>"**.

4.4. Data Upload

Once the data is transformed and you have received the S/4HANA template file filled with the data (response file), you are ready to upload the same to S/4HANA system via Migration Cockpit.

Follow the below steps to upload the data to S/4HANA system:

a. Save the response ZIP file received.
b. Extract the ZIP package and open the XML file in Microsoft Excel. Click save. Close the file.
c. This is the file that should be taken to SAP S/4HANA Cloud Public Edition migration project and uploaded. For details on uploading a file via migration cockpit in SAP S/4HANA Cloud Public Edition refer to this help document.

5. Customization and Enhancement of integration flow

You can customize the mapping or enhance the integration flow as per your requirements. For details on customization, you can refer to these tutorials:

- Tutorial 1: Customizing standard integration flows for data migration from SAP Business ByDesign to SAP S/4HANA Cloud Public Edition.
- Tutorial 2: Updating data structure in integration flows for data migration from SAP Business ByDesign to SAP S/4HANA Cloud Public Edition.
